

Inference: observe, imagine, act, repeat

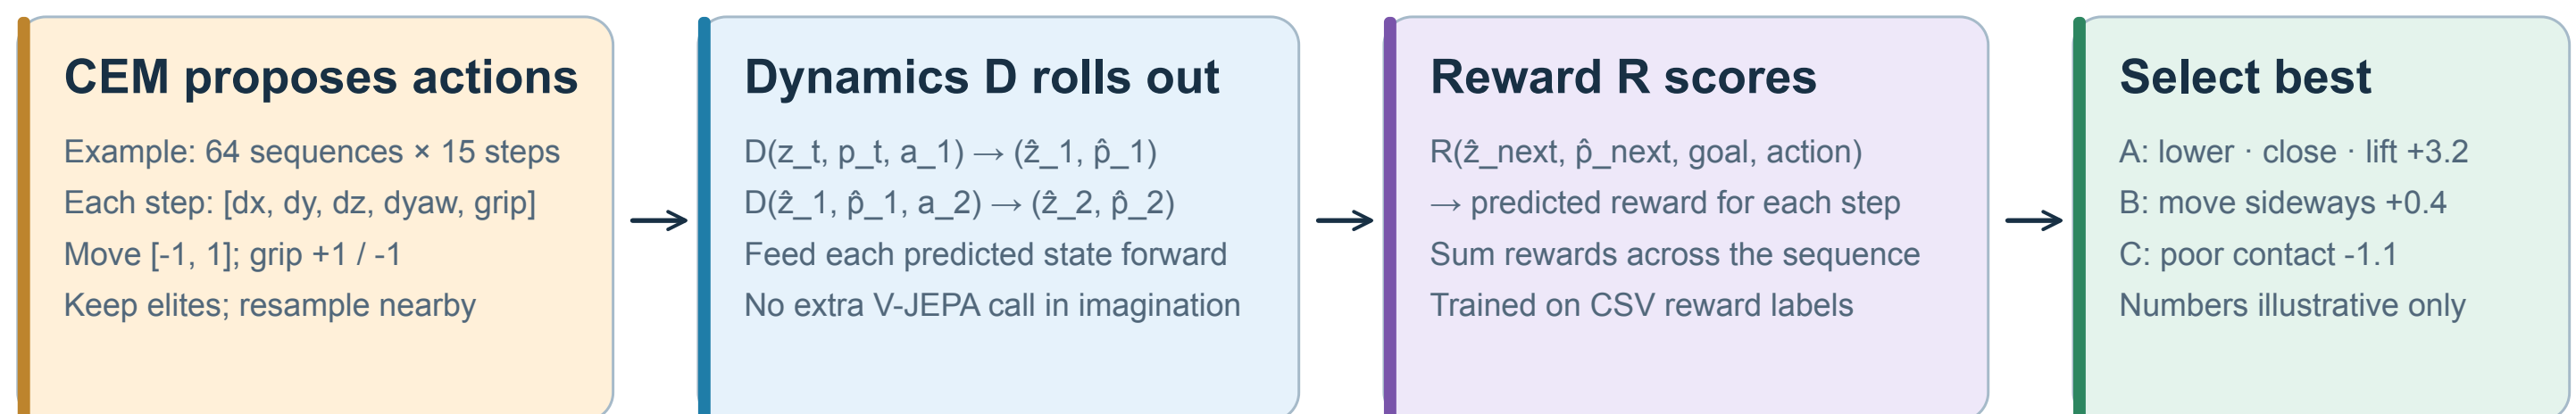

PROPOSED SYSTEM

The trained models score possible futures; only one proposed action is executed in MuJoCo

01 REAL OBSERVATION · CURRENT CONTROL STEP

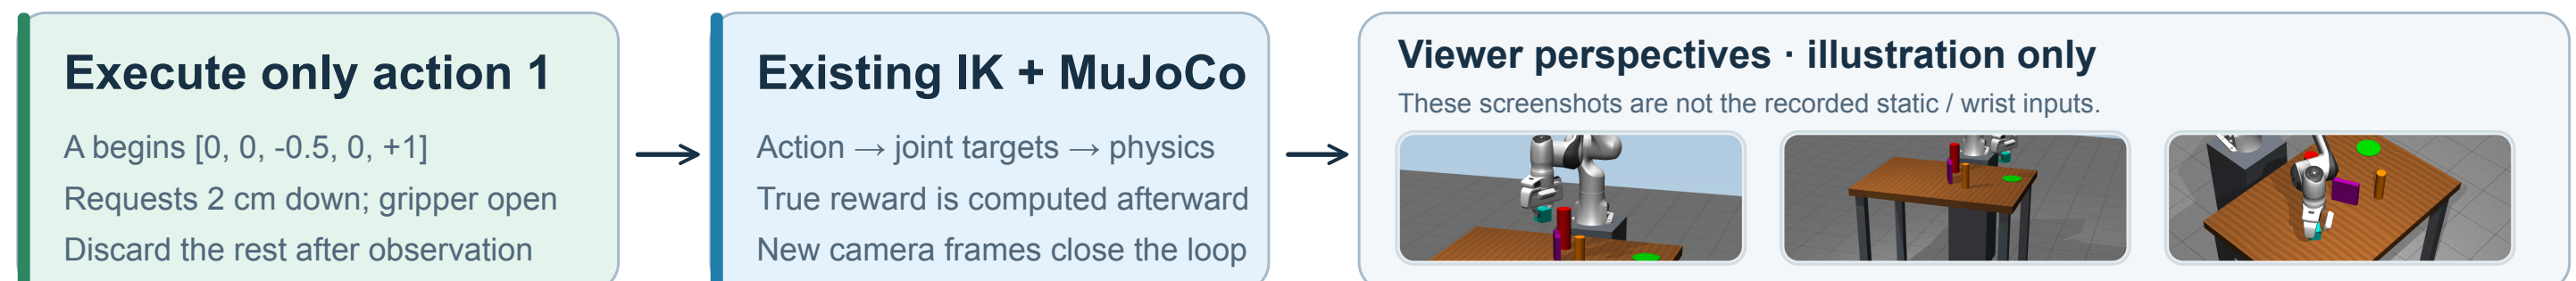

02 IMAGINED ONLY · MANY CANDIDATE ACTION SEQUENCES

Predicted z is passed to D again for the next imagined step, and to R for scoring. It is not decoded into an image.

03 ONE REAL ACTION · THEN REPLAN

Next cycle: take NEW real images $\rightarrow$ run V-JEPA again $\rightarrow$ CEM plans again from the measured state.
